Description
This does probably affect (all) previous Tiki versions, too.

When creating links to pages that have some kind of wiki syntax in them, the wiki syntax will be interpreted and therefore break the links. I noticed this when using links to Germany's premier law website, e.g.:

Here without anything: http://www.gesetze-im-internet.de/bfdg/__2.html
Here as no parse: http://www.gesetze-im-internet.de/bfdg/__2.html
Here as a link with no parse: http://www.gesetze-im-internet.de/bfdg/__2.html

The last one is a working workaround, but it's a bit sick to say the least. I think Tiki shouldn't parse URLs as wiki syntax at all.

I could also reproduce the same behaviour with other wiki syntaxes as for example the one for italics: http://example.com/my''weird_link.html

Solution
Is fixed in 20.x.
