Description
   I have TikiWiki 1.9.2 installed on a Linux system with PHP Version 4.3.11 (GoDaddy).
   I set up my images to be stored on disk not in the database.
   The Firefox browser 1.0.x or 1.5.x works fine.
   Internet Explorer 6.0 won't diplay the image with view_image.php when you use id=xxx but using name=xxx works fine.
   It also won't show images in the Image Gallery. I assume it is using view_image.php based on id.
   I didn't see any mention of this in the 1.9.3 release notes so I did not try installing the newer version.

Solution
   Please retest with latest stable version (1.9.7 as of now).

   I have dozens of sites with 1.9.7 without any issue.
