Description
In 12.x LTS when [page...] syntax is enabled and used in a wiki page where collapsible sections are present (!!-Foo Bar syntax) it breaks the column layout of the site badly.

Show instance created and reproduced it there.

To login use admin 12345.

Steps to reproduce:

1. go to tiki-admin_modules.php?edit_assign=1&cookietab=2 and assign module to the left column
2. go to tiki-admin.php?page=wiki and enable Wiki Pagination under the Features tab (-wiki Pagination+)
3. edit a wiki page and add some collapsible sections (using the collapsible heading syntax) separated by [page...]
4. go to 2nd or 3rd page (after second collapsible section it seems to start break) and see the left column modules wrap down under the main content of wiki page

This persists in trunk as of r68584.

I am guessing this is due to the divs used to make sections collapsible not being open or closed properly. Related code from parserlib.php:

```php
// Close lower level divs if opened
for (; current($divdepth) >= $hdrlevel; array_shift($divdepth)) {
    $data .= '</div>xffffff;
}

/aclose2 = '<div id="' . $thisid . '" class="showhide_heading" style="display:' . ($divstate == '+' ? 'block' : 'none') . ';">';
$headerlib = TikiLib::lib('header');
$headerlib->add_jq_onready("setheadingstate('$thisid');");
array_unshift($divdepth, $hdrlevel);
```

Due to another bug which seems to ignore the np syntax I had to replace the first three dots "..." with "..." in the Description to prevent breakage of the site layout when the item is listed in Plugin TrackerList on this site.

Philippe Cloutier 21 Jan 19 19:19 GMT-0000
Thanks luciash
I had commented the List section in Tiki19. It's using LIST, not TRACKERLIST, but perhaps it could be re-enabled too (I imagine there was one or a few tickets breaking it too).

luciash d' being [] 21 Jan 19 19:45 GMT-0000

Yes. Can be re-enabled now I guess. This one was breaking in TrackerList via the Description field shown in the popover (pop-up).
