LDAP - forced to login twice

Installed a fresh tikiwiki 17.1.
Enabled and configured LDAP.

When trying to login, getting this error in frontend:
"Authentication error"

Had to login second time in order to be logged in.

Here are the LDAP logs:

UserLib::validate_user_ldap()
Searching for user information with filter: (sAMAccountName=acovali) at line 278 in /srv/www/htdocs/wiki/lib/auth/ldap.php
Bind successful.
UsersLib::ldap_sync_user_data()
UserLib::disable_tiki_auth()
Analyzed /lib/userslib.php, line 904 - 932

It's not getting in "if ($result == USER_VALID)" because $result is a string that is a username

```php
$result = $this->add_user($user, $pass, $email);
```

If I replace it with

```php
$result2 = $this->add_user($user, $pass, $email);
```

$result now would get value from

```php
$result = $this->validate_user_ldap($user, $pass);
```

So this edit fixed the issue, and I was able to be logged in after first login attempt

```php
$result2 = $this->add_user($user, $pass, $email);
```

I went through the same issue and this prevented the double login on account creation.
