Description
I used the Draw plugin in a wiki page, specifying an SVG file. After saving the page, when I click on the Edit icon for the image, the edit dialog displays with "Edit: <file name>" in the title bar, but in the body there is only a No Route Found error message.

Solution
PluginDraw works fine in the show instance, so the route not found error must have been a problem related to my local test instance. So I'm closing the bug report.
