### Description

It is not possible to set a multilevel menu using the default implementation of bootstrap in Tiki.

The result of trying using Tiki tools is a weird behavior that doesn't fit the available tools and the user choice (sublevel are omitted and missing).

They were debate among the dev community on early bootstrap v3 days about having or not multilevel menu and multilevel dropdown.

As per today, there are already plenty of solutions for v3 and v4 including multilevel menu; Goole search

Implementing one of those solution in our Tiki menu (that include multilevel menu tools) will avoid revamping it from the ground and having to distinct interface (bootstrap menu vs suckerfish/legacy tiki menu).

### Workaround

That's how bootstrap menus work, use suckerfish (CSS) or the old vertical menus for more levels

I am experiencing the same issue on my 18 install Bernard. The interface stalls or will not place the menu item between other menu items.

I love the drag and drop interface concept, I hope we can get this working for 18 !

Bernard Sfez / Tiki Specialist 03 Jan 18 15:06 GMT-0000

Hi John,

The interface is ok for me... Require a little experiences but I didn't have big issue with drag and drop.

Can you give more information ? (system, browser, what you did...)

John Morris 04 Jan 18 03:23 GMT-0000

Hello Bernard, I did a quick screen cast of the issue, using Edge Browser in this video, but the same issue persists in FireFox as well. You'll see I try to drag the menu down to place it among the first menus firstly the space between the menus don't open up to allow the placement, and when I let it go, I get sprung to the bottom of the menu page.

And I cannot drag and drop reorder existing menus either.

Jonny Bradley 19 Jan 18 12:17 GMT-0000

Hi John,

Sorry, but at the moment if you drop the new one in the gap between two options it gets dumped at the end, drop it over an existing one - hopefully i (or someone) can improve this one day... but it's not so easy ;)

Jonny Bradley 19 Jan 18 12:38 GMT-0000

Odd, just found menu option not draggable too, they were ok the other day! 😞  
Working on it...

Jonny Bradley 19 Jan 18 12:50 GMT-0000

Ok, hopefully improved in r65265 - it now tries to find the nearest one if you drop it in a gap, and if all else fails it adds it to the top, which i guess is slightly less inconvenient.

Strangely, the *not being able to drag anything at all* thing just went away when i refreshed the page, so maybe try a force reload if it continues happen for you, and if it's reproducible reliably let me know how, something odd going on here for sure... ;)

John Morris 20 Jan 18 00:28 GMT-0000

I'll give it a go tonight!

John Morris 20 Jan 18 13:16 GMT-0000

Jonny, I svn'd up on my own 18, and the fix you created seems to have made things much smoother. I still am unable to drag to in-between menu items (I get kicked to the bottom still) but I can drag really smoothly and lay it on top of another item, and it drops it directly beneath that item. And it's reliable every time now, as before it was really shakey and jerky. You definitely improved things. I am unsure if drag to "in between" was actually the goal originally? I hope I did not open Pandora's box on that portion of the menu improvements.

Thanks a million sir

Bernard Sfez / Tiki Specialist 21 Jan 18 08:39 GMT-0000  
Please John, create a ticket for your specific issue.

The issue for which I started this ticket is different and the ticket has been reclassified in a feature request.

John Morris 21 Jan 18 13:18 GMT-0000  
Will do Bernard, thank you.
