Description

When trackers are not present (perhaps lost or otherwise mistyped) a 500 (internal server error) is produced.

At the very least it should be throwing the correct error 404 (page not found), but ideally would produce a Tiki error reporting something like "Sorry that tracker does not exist" or something similar.

This situation of lost trackers happed on dev.tiki.org where trackers where lost:

https://dev.tiki.org/tiki-view_tracker_item.php?trackerId=5&itemId=4130

https://dev.tiki.org/tiki-view_tracker_item.php?trackerId=5&itemId=4129

They were indexed by Google and linked within the content of the tiki-sites. It looks bad flaunting server misconfiguration errors on our sites.
