Rating

★★★★★ (0) ?

Description

plugin include does not work on Tiki18 as reliably as on Tiki15

start and stop parameters are not respected

```
start="~tc☐~ includeon ~/tc~" stop="~ tc☐~ includeoff ~/tc~"
```

Workaround

Just an idea to confirm the parser issue

Try on the included page:

```
~tc~ includeon ~/tc~ __Content to be included.__ ~tc~ includeoff ~/tc~
```

and then on the other page in the PluginInclude params:

```
start="includeon ~/tc~" stop="~tc~ includeoff"
```

Priority

Demonstrate Bug (Tiki 19+)

@luciash d' being ☐ thanks for the workaround suggestion!

it works, however it would require to change both the included page and the page where it is included

having a 9000+ page site it is time consuming to detect

yes, sql query could be written, but it is not trivial for non-tekkies and error prone

any other ideas? 😊

thanks again,

cheers,

gezza

rolling back this commit in the Tiki 18.1 parserlib solved the problem:

<https://sourceforge.net/p/tikiwiki/code/60555/>
