plugin include does not work on Tiki18 as reliably as on Tiki15

start and stop parameters are not respected

```
start="-tc~ includeon ~/tc~" stop="- tc~ includeoff ~/tc~"
```

**Workaround**

Just an idea to confirm the parser issue

Try on the included page:
and then on the other page in the PluginInclude params:

```html
start="includeon ~/tc~" stop="~tc~ includeoff"
```

Demonstrate Bug

Please demonstrate your bug on show2.tikiwiki.org

@luci thanks for the workaround suggestion!

it works, however it would require to change both the included page and the page where it is included

having a 9000+ page site it is time consuming to detect

yes, sql query could be written, but it is not trivial for non-tekkies and error prone

any other ideas? 😊

thanks again,

cheers,

gezza

rolling back this commit in the Tiki 18.1 parserlib solved the problem:

https://sourceforge.net/p/tikiwiki/code/60555/
