Description

I'm trying to customize my Tiki instance. On the Look & Feel (tiki-admin.php?page=look) page, in the second tab (General Layout), I want to change the default logo. The only way (I saw) to do so is to specify 'manually' an image path from the img/ folder. I captured the screen, you can have a look <https://ibb.co/izZ0X7> class="wiki wikinew text-danger tips">here.

UX speaking, it would be better for the user to import an external image (logo) in the img/ folder and select it as a logo easily, through an Image Importer.
