Description

We use the code plugin with the Full WYSIWYG editor to display code snippets.

- Support Tiki's "wiki syntax" is checked
- Limited wiki parsing is unchecked
- Use Wiki syntax in WYSIWYG is unchecked

(in order to create true html wiki pages with some wiki syntax for plugins)

Steps to reproduce:

- Use code button in WYSIWYG editor, put some code in the body section and click save

Original code snippet

```
#include <iostream> using namespace std; int main() { cout << "Hello, World!"; return 0; }
```

- Clicking again on the plugin (or saving the page and view) will give you this distorted code snippet:

Code snippet after first save

```
#include &lt;iostream&gt;<br>using namespace std;int main() <br>{<br>    cout &lt;&lt;<br>    "Hello, World!";<br>    return 0;<br>}
```

- Paste again the code snippet in the plugin and click save
- Code is displayed correctly

```
#include <iostream> using namespace std; int main() { cout << "Hello, World!"; return 0; }
```

As the workaround is simple but annoying, I suppose this is quite easy to fix, is there someone who can check this out?

Anyone who can fix this simple but annoying bug, please?

Marc Laporte 04 May 18 07:07 GMT-0000

WYSIWYG is not simple.

The WYSIWYG editor is designed to handle HTML and doesn't understand wiki syntax (which PluginCODE is).

See:

<https://wysiwygproblems.com/>

CKEditor 5 will have a wiki syntax mode so it should be better.

<https://medium.com/content-uneditable/ckeditor-5-the-future-of-rich-text-editing-2b9300f9df2c>

But that is not a quick fix.

<https://support.ckeditor.com/hc/en-us/articles/115005971405-How-to-migrate-from-CKEditor-4-to-CKEditor-5->

Do you know developers that could help?
