Description

Fancy table
code works in ver 15 but copy and paste into ver 18 causes fault to table sorter list.
The common name shows data function list.
I have used tikiwiki syntax **around common name** to make page link.
in ver 15 it works, but the same code in 18 caused common name list to expand and show data
function list
If you remove the the problem disappears
Update
it works on the show.tiki site fancy table page
I am running ver 18 on a home server (debian linux) does this mean the jquery or javascript on the
server is wrong or the ver 18 installation
version 15 is on the same server and works okay.
