Description

I got this message:

Incorrect integer value: ' ' for column 'healed' at row 1

when adding a Tiki Scheduler task (in mysql strict mode)

Maybe it's just a warning?

I report it, just in case.

FYI, I couldn't make the simple task to rebuild the search index, through the scheduler command to run (through the Tiki UI) apparently, but I don't know whether it's related to this bug or to something else.

Using latest 18.x svn

WTF, edits to tracker items in dev.t.o are LOST!

I tried adding this new content to the "Description" textarea field twice, with total failure!:

“

Tested again (using latest 18.x svn again), same failure, also with the task to do some list:execute action, which runs fine otherwise through the console.php command on a cronjob directly at the crontab level.

I stop attempting to use Scheduler (Web interface) at all in my projects since I never managed to get it running, nor a simple task. Maybe it's not mysql 5.7 ready?
