Description
To help solve the problem of tall responsive wide tables or other content not being understood to be scrollable, one solution is to add a second scrollbar at the top of the scrollable area. A script to do this is at https://github.com/avianey/jqDoubleScroll.

Solution
Add the library to be fetched and installed with Composer.
r70032 part way there...

Update: library has been added and double-scroll feature is working as expected.
