### Related-to

- Not possible to set a different module than the first one with the MODULE plugin
- Not possible to set a plugin using the help system

### Description

It is not possible anymore to set the plugin module on a wiki page using plugin help.

As seen on video it is not possible to select a module and even trying the first (default) one the code is not pasted in the text area.

(also tested on my local : Last update from SVN (18.2svn): Sunday July 8, 2018 00:00:49 +03 - REV 66911 (InnoDB))

**Update** : Tested on Mac, Safari and Chrome on SVN (20.0svn): Sunday June 16, 2019 19:04:34 IDT - REV 70218 and it is still there.

**Solution**

r66997 in trunk and r66998 in 18.x ? 🤔

Second attempt: r70294 in 20.x, will backport once tested

**Workaround**

Insert manually on the page

□□□□□□

{module}

save the page then using the edit icon, edit and set properly your module.

**Importance**

10 high

**Easy to solve?**

It is still broken I just retested today.

Philippe Cloutier 08 Jan 19 21:51 GMT-0000

Bernard, is this not a duplicate of Not possible to set a different module than the first one with the MODULE plugin?

Bernard Sfez / Tiki Specialist 18 Jun 19 06:52 GMT-0000

While it look the same, I can't tell.

I added it as related as it may give a hint on the problem.

Bernard Sfez / Tiki Specialist 18 Jun 19 06:53 GMT-0000

Jonny, sorry it is stil there on Tiki20.

Bernard Sfez / Tiki Specialist 30 Jun 19 07:23 GMT-0000

Tested on Tiki20, that's the fix !

Thanks, can be backported.
