### Description

On a Tiki 18x REV 67053

On Admin Wiki, Display page name as page title is on by default.

On regular wiki page I can turn it off or back to default without problem.

When I use the wiki page as template (plugin list) to display an item using the semantic alias the title is always displayed even if I turn it off.

I set an instance to demonstrate but "Show" is not working with SEFurl.

### Workaround

At tiki-admin.php?page=wiki I uncheck "Display page name as page title" and started to add page title manually where it was needed.

I give it then another try re checking back "Display page name as page title".

This time the setting was applied.

Seems it didn't worked on a page created before I turn it on then off on the page properties until I turn it off then on back from the admin panel.
