##### Related-to

- ● Profile application via wizard or Suggested Profiles quietly fails on Tiki 17+
- ● User Wizard Fails

##### Description

Attempt to apply Personal Blog and Profile on clean 18.2 install does fail.

Here is the show.tiki.org instance which shows the problem:

u: admin

p: 12345

Edit: Here I also include screenshot with the error after trying to apply profile from within Control Panel (as advised in #tikiwiki):

##### Solution

~~Works for me. I tested in your own show.t.o instance, and I was able to apply the profile (after the usability issue of needing to re-search the profile in the Profiles control panel when sent there from the Profiles Wizard, but this is another issue, already reported at the bug linked in the "related to" field of this report.~~

~~Can you please retest or something to see whether you still see the same error?~~

Thanks!

Since I had the configurations wizard page open, I tried to install this profile, and this is what happened for me: First of all, I confirm that it fails. After clicking on the "apply now" link, I am taken to

tiki-

admin.php?profile=Personal\_Blog\_and\_Profile\_12x&show\_details\_for=Personal\_Blog\_and\_Profile\_12x&categories[]=18.x&categories[]=Featured+profiles&repository=http%3a%2f%2fprofiles.tiki.org%2fprofiles&page=profiles&preloadlist=y&list=List#step2

and see the personal blog profile listed. But clicking on the profile info has no effect. This is info from the inspector:

Request URL:

[http://localhost/Tiki/branches/branch18/profile-0&getinfo&pd=Personal\\_Blog\\_and\\_Profile\\_12x&pp=undefined](http://localhost/Tiki/branches/branch18/profile-0&getinfo&pd=Personal_Blog_and_Profile_12x&pp=undefined)  
Request method: POST Remote address: [::1]:80 Status code: 404 Version: HTTP/1.0

luciash d' being 08 Aug 18 12:52 GMT-0000

IIRC it fails because the URLs from the wizard do not contain the token which you get when using the Profiles Panel directly... I don't know if there is any way to fix that in the wizard...

What about using the PluginProfile? Ah, that does not install dependencies (yet) it seems... 😞

Gary Cunningham-Lee 08 Aug 18 13:06 GMT-0000

It used to be possible to install a profile from the configuration wizard (not directly, but the wizard would redirect to the profiles panel and the selected profile info would be fetched from profiles.t.o). I just checked in a Tiki 15 site to confirm that. Apparently something broke between Tiki 15 and 18.

Saša Janiška 09 Aug 18 12:59 GMT-0000

Just to confirm that I was able to apply e.g. Personal Blog profile directly from the wizard in 15.7, so it would be nice to have in in 18.x/19...having ready site by applying profile is cool feature which is, imho, especially helpful to ease learning for tiki beginners.

All in all, I'm, so far, quite pleased with Tiki, abandoned idea to further consider Type3/Neos and hopefully be able to somehow contribute back to this nice community. 😊

John Morris 09 Aug 18 11:31 GMT-0000

I believe this is also the same issue.

See the solution on

[https://dev.tiki.org/tiki-view\\_tracker\\_item.php?itemId=6374&threadId=6389&cookietab=1#threadId6389](https://dev.tiki.org/tiki-view_tracker_item.php?itemId=6374&threadId=6389&cookietab=1#threadId6389)

(Jonny volunteered to fix this?)

Philippe Cloutier 10 Aug 18 12:53 GMT-0000

Lukas, did you perhaps mean to mark this as a duplicate of ticket #6374?

luciash d' being 10 Aug 18 14:44 GMT-0000

Yes, thanks for the heads-up. Fixed.

Philippe Cloutier 10 Aug 18 15:35 GMT-0000

Lukas, I think this is not a duplicate of ticket #6374.

Gour, which PHP version do you use?

Saša Janiška 17 Aug 18 18:48 GMT-0000

I believe it happened with both 5.6 and 7.2

Philippe Cloutier 17 Aug 18 18:50 GMT-0000

Thanks, well please let us know if you confirm that happens with a PHP version prior to 7.1.
