Description

Preferences report reports "" when you run it on a multitiki based installation

```
root@server:/var/www/tiki18farm# php doc/devtools/prefreport.php > prefreport.csv
root@server:/var/www/tiki18farm# cat prefreport.csv Cannot initiate database. Tiki is not
installed.
```

Or autodetect that it's on a multitiki install and prompt the user which tiki you want to have your report on (like with TRIM).

or just report them all, with suffixes corresponding to the multitiki names in the installation.

I tagged it also against "Community projects" after the discussions we had in the TAG meeting from today: <https://tiki.org/20180808-TAG-Meeting>.

Is this still an issue?
