Description

Runing a command like this

```
php console.php list:execute "Foo page" "Bar Action"
```

produced these report with warnings:

```
PHP Stack trace: PHP 1. {main}() /var/www/tiki18farm/console.php:0 PHP 2.

Short answer:

it is solved in 19.x

It is OK in 18.x with PHP 7.1, but not 7.2

This affects PHP 7.2 and is solved upstream: <https://github.com/zendframework/zend-mail/pull/189>

Tiki 18.x has "name": "zendframework/zend-mail", "version": "2.8.0",
https://sourceforge.net/p/tikiwiki/code/HEAD/tree/branches/18.x/vendor_bundled/composer.lock

Tiki 19.x has "name": "zendframework/zend-mail", "version": "2.10.0",
https://sourceforge.net/p/tikiwiki/code/HEAD/tree/branches/19.x/vendor_bundled/composer.lock

Which is the latest as of today: <https://github.com/zendframework/zend-mail/releases>

So we were right to keep our libs up to date!
