Feature
Wiki (page view, edit, history, rename, etc)
Hotword

Solution
The bug is in parse_data(). It parses wiki links (by calling parse_data.wikilinks()) before hotwords (by calling parse_data.inlineSyntax(), via parse_data.process.maketoc()). The resulting HTML has an A element embedded in the normal A element:

```
<a href="x" title="Part of description before hotword :::::<a class="wiki"
href="http://www.hotword.target" target='_blank'>Hotword</a>,:::::" class="wiki
wiki_page">label</a>
```

mose added to replace_hotwords() a hack inserting a ":::::" sequence before and a ",:::::" sequence after each keyword in a description attribute to neutralize the hotword substitution (as described in the function's comments). But this hack was broken by r19319, since both of the characters in the magic sequences (the colon and the comma) are now part of the hotword separator characters (feature_hotwords_sep).

Workaround
Either:

1. Remove ":" from feature_hotwords_sep
2. Remove ",," from feature_hotwords_sep
3. Remove hotwords from page descriptions
4. Use external links rather than wiki links
