Description

Unified Index:

Works both in Elasticsearch and MariaDB

This works: <https://dev.tiki.org/Wishlist-Search-Page>

But:

https://dev.tiki.org/Tiki19#Open_or_Pending_blockers_and_regression works with Elasticsearch but not MariaDB

Code copied below:

```
{LIST()}{filter content="5" field="tracker_id"}{filter field="tracker_status" content="o OR p"}{filter field="tracker_field_version" content="331"}{filter field="tracker_field_category" content="265 OR 172"}{filter field="tracker_field_resolution_status" content="New OR Accepted OR Confirmed"}{* sort mode="modification_date_ndesc" *} {sort mode="tracker_field_priority_ndesc"} {OUTPUT(template="table")} {column field="mod_date" label="LastModif" mode="raw"} {column field="tracker_status" label="" mode="raw"} {column sort="tracker_field_resolution_status" field="tracker_field_resolution_status" label="Resolution Status" mode="raw"} {column sort="tracker_field_submitted_by"}}
```

Perhaps the "new" keyword filtered out by MySQL?
<https://tiki.org/forumthread70385-Search-without-searching>

Victor Emanouilov 24 Jan 19 15:37 GMT-0000
New is not a default stopwords in recent MySQL versions InnoDB fulltext, at least. Also, <https://dev.tiki.org/Wishlist-Search-Page> seems to work when you search by Resolution Status: New which internally is transformed to the same query as filter by resolution status in the other page. It must be something else. I am not sure what is not working with mysql - can you post screenshots or examples of what is found or not found and how do you expect it to work?

luciash d' being 24 Jan 19 15:51 GMT-0000
Is not there default limit to search for words longer than 3 characters in MySQL/MariaDB?
