Description

They are case you want your user to create a tracker item at creation but want them to fill supplemental information later.

When setting tracker to store user information (Log-In, <https://doc.tiki.org/User-Tracker>) if in the Group setting you don't assign anything for "Group or User Tracker Registration Fields" (if you don't need to fill anything more but to save an item with the username) the tracker item is not created.

To reproduce the bug;

Set everything like described at : <https://doc.tiki.org/User-Tracker>

On the Group page for the registered group let "Group or User Tracker Registration Fields" empty. The registration will work but no item will be created.

Add any field of the user tracker in the "Group or User Tracker Registration Fields" and it will work.
