Description
A Group assignment to many users is lost repeatedly under unknown conditions

It's the third time I have to re-assign that groups to those users.
I have no clue why this happens 🙁

Maybe associated with Group Watches (which are set in a forum to get those users recive notification from threads?) That's the only difference that I'm aware of from the group they are loosing membership, apparently after some time, and in that time some new posts are made in that forum.... Related events?

Fabio Montefuscolo 24 Jan 19 15:50 GMT-0000

I could not reproduce it.

Steps I took on first attempt
1. Fresh install of Tiki19
2. Created a group called `Evoludata`
3. Created 9 users and assigned it to Evoludata
4. Added watch to home wiki page using `Group Watch`

Second attempt
1. Enabled forums
2. Created a forum monitored by `Evoludata`

Third attempt
1. Created a topic in a forum
2. Added it to be monitored by `Evoludata`

The users were not removed from groups Evoludata
