● ● No TAKE button shown once set a webmail IMAP account. Clear docs and profile update needed for Groupmail

Description
When using Groupmail and the Webmail Inbox Module(Profile GroupMail) if you click on "TAKE" the label TAKE should change for your username and you should be redirected to a form to reply (from memories). It was working with Tiki18.

It is partially broken.
The CSS class change to reflect the status (from "read" to "replied") but the user name is not updated and it doesn’t open the webmail page to reply to the message.
