Description
    When I add the FancyTable tool in the toolbar, editing a page in wysiwyg is impossible because the striped "loading" bar just turns and never stops. One can never edit.

    The browser devtools claim that « The requested URL /vendor_bundled/vendor/ckeditor/ckeditor/plugins/FancyTable/plugin.js was not found on this server. »

    This file was probably never in any version of Tiki.

Solution
    r68797 fixed this for Tiki 19.1 and above.

    This was backported for 18.4 by r69564.

Comments

Olaf-Michael Stefanov 10 Jan 19 20:32 GMT-0000

prev comment withdrawn as I solved the posted problem.

Olaf-Michael Stefanov 10 Jan 19 20:35 GMT-0000

If, as you post, "« The requested URL
/vendor_bundled/vendor/ckeditor/ckeditor/plugins/FancyTable/plugin.js was not found on this server. »"
and
"This file was probably never in any version of Tiki."
... couldn't this be solved by installing the missing plugin ?
As I'm no expert in vendor_bundled tools, could someone who is, point me to where to find this plugin
and/or how to install it?

Philippe Cloutier 11 Jan 19 17:52 GMT-0000

It doesn't look like FancyTable is a CKEditor plugin.

Jean-Marc Libs 11 Jan 19 23:44 GMT-0000

Fancy Table is a Tiki plugin, it should not have anything to do with ckeditor 😕
There is no ckeditor plugin which knows of Tiki's FancyTable plugin.

Philippe Cloutier 11 Jan 19 19:04 GMT-0000

I failed to reproduce this with Google Chrome 70. Which exact version do you use and which browser do you use?

Jean-Marc Libs 11 Jan 19 23:45 GMT-0000

I reproduced on http://jyhem-9952-6994.show.tikiwiki.org/ using Firefox 64.0Firefox Release December 11, 2018

Philippe Cloutier 14 Jan 19 15:12 GMT-0000

Thank you, I reproduce this with Google Chrome 70 on the show instance you created. However, I cannot reproduce on both of my Tiki 18 instances. Precise reproduction steps for how you add the tool may help.

Olaf-Michael Stefanov 15 Jan 19 11:54 GMT-0000

I was able to reproduce this with Google Chrome 71.0.3578.94(64-bit) in Jean-Marc's test site. The "real world" problem exists in a site using Tiki-18 (18.2) on a site running on a linux server at the ISP all-inkl.com . tiki-check.php tells me only that the OS is Linux, with Debian GNU, and that the webserver is Apache (no further details). PHP version is 5.6.38-nmm1. This site was copied and upgraded from a site in production since 2014 running Tiki-12 with php5.5. There the fancy table plugin worked (and still works) within the WYSIWYG editor in tiki, allowing users to switch, as they find preferable and necessary, between the wiki and WYSIWYG editors.

Philippe Cloutier 15 Jan 19 14:52 GMT-0000

I reproduced with my Tiki 19 install after adding the tool in section Global and View mode Wiki and WYSIWYG.

Philippe Cloutier 17 Jan 19 17:40 GMT-0000

I reproduced this with Tiki 18.3.

Philippe Cloutier 15 Jan 19 14:57 GMT-0000

Jean-Marc, did you mean this happens with any plugin, or is this specific to the FANCYTABLE plugin?

Jean-Marc Libs 26 Feb 19 17:53 GMT-0000

I meant everything I wrote: I have this issue with FancyTable.

I don't know about the others. Maybe it's related to all plugins with a space in their name, as Jonny's fix suggests?

Did you find time to experiment on other plugins such as the ones Wiebe mentioned? Can you please report?

Philippe Cloutier 27 Feb 19 14:30 GMT-0000

So far this report's scope wasn't clear. I will interpret your reply as an indication that you only experienced this with FANCYTABLE.

Philippe Cloutier 25 Jan 19 22:12 GMT-0000

I confirm that r68797 fixes.

Wiebe 29 Jan 19 08:55 GMT-0000

There are more plugins (when enabled) are blocking the WYSIWYG editor:
28-Jan-2019 11:22:36 Europe/Amsterdam No route found -
full:/vendor_bundled/vendor/ckeditor/ckeditor/plugins/MediaPlayer/plugin.js query:t=IA8E
28-Jan-2019 11:22:36 Europe/Amsterdam No route found -
full:/vendor_bundled/vendor/ckeditor/ckeditor/plugins/RemarksBox/plugin.js query:t=IA8E
28-Jan-2019 11:22:36 Europe/Amsterdam No route found -
full:/vendor_bundled/vendor/ckeditor/ckeditor/plugins/ImageAnnotation/plugin.js query:t=IA8E
Is that fixed as well with r68797?

Philippe Cloutier 27 Feb 19 14:31 GMT-0000

Thank you for reporting Wiebe,
Which Tiki version do you experience this with?

Jean-Marc Libs 20 Feb 19 00:35 GMT-0000

Tested on Tiki18.x:
It fixes the issue as described, meaning the WYSIWYG editor is not blocked any more.
BUT the plugin is unusable in wysiwyg mode.
Clicking it does nothing and the console shows:
"TypeError: val is undefined"

It still works fine in wiki syntax mode...

Philippe Cloutier 20 Feb 19 13:45 GMT-0000

If this persists, open a new ticket or at least retitle this one (and please answer the question above if the new title does not).

Jean-Marc Libs 26 Feb 19 17:48 GMT-0000

Sorry Jonny, my mistake.

I tried to showcase the issue on the show instance but as soon as I backported (manually) on show, all was fine on show.
Therefore your fix is confirmed to work, please backport on Tiki18.x and close the issue. Or shall I?

I still can't use pluginFancyTable on Olaf's site but so far I am unable to reproduce on show. It must be something else. 🙁

Philippe Cloutier 15 Apr 19 21:52 GMT-0000

Did someone update this ticket's show.tiki.org instance? And if not, am I missing something or does it not show that the bug does not happen?

Jean-Marc Libs 17 Apr 19 00:38 GMT-0000

The show instance does not show the bug any more. All fixed and the report is closed.
If the revision number does not match the expected values, it probably means the fix was done by hand. I can't remember.
