### Description

Composer 2.0 requires some changes to the organisation of the packages in `vendor_bundled`, at the moment we are getting warnings from composer install like this:

---

Deprecation warning: `require.Sam152/Javascript-Equal-Height-Responsive-Rows` is invalid, it should not contain uppercase characters. Please use `sam152/javascript-equal-height-responsive-rows` instead. Make sure you fix this as Composer 2.0 will error.

which should be pretty simple to fix by changing the case of the package names, and

---

Deprecation warning: `require.jquery/plugins/colorbox` is invalid, it should have a vendor name, a forward slash, and a package name. The vendor and package name can be words separated by `-`, `.` or `_`. The complete name should match `"[a-z0-9]([_.-]?[a-z0-9]+)*/[a-z0-9]([_.-]?[a-z0-9]+)*"`. Make sure you fix this as Composer 2.0 will error.

where we have three parts to the package, should also be ok to fix, but some may need upstream fixes which hopefully will be on their way.

## Another issue

Another issue is what to do about the other supported branches, 19.x, 18.x and 15.x - as they will presumably automatically update themselves to composer 2.0 when setup.sh is run, and then break. We need to devise a way to keep these old branches on composer 1.x.

## Solution

<http://sourceforge.net/p/tikiwiki/code/70016>

<http://sourceforge.net/p/tikiwiki/code/70017>

<http://sourceforge.net/p/tikiwiki/code/70018>

However, see "Another issue" just above.

## Comments

Roberto Kirschbaum 16 May 19 09:03 GMT-0000

Ricardo provided us with a fix:

<http://sourceforge.net/p/tikiwiki/code/70016>

<http://sourceforge.net/p/tikiwiki/code/70017>

<http://sourceforge.net/p/tikiwiki/code/70018>

We need people to test it please!

luciash d' being 16 May 19 11:18 GMT-0000

Update tested. Looks pretty good to me. Sent output in private to (you) Roberto.

Roberto Kirschbaum 16 May 19 12:27 GMT-0000

Thanks luciash!

I wonder however about:

>> Another issue

>> Another issue is what to do about the other supported branches, 19.x, 18.x and 15.x - as they will presumably automatically update

>> themselves to composer 2.0 when setup.sh is run, and then break. We need to devise a way to keep these old branches on

>> composer 1.x.

Marc Laporte 16 May 19 22:56 GMT-0000

Surely, Composer itself will have a way to respect Semantic versioning 😊

<https://github.com/composer/semver>

If no one has anything against, I'll close this item.

Roberto Kirschbaum 04 Sep 19 09:35 GMT-0000

I will close it then, since I had no replies from anyone...
