Description

I want to be able to filter on field 1 having one condition, OR field 2 having another condition. For example, in the LIST() below I want to be able to display tracker items whose beginning date are in the next N days, OR the ending date being in the next M days:

```
{LIST()} {filter content="7" field="tracker_id"} {filter field="tracker_status" content="o"}  
{filter range="tracker_field_TaskStartDate" from="now" to="5 days"} <-- But here I'd like to be  
able to filter not on one field but rather on two fields, something like:  
tracker_field_TaskStartDate from="now" to="5 days" OR tracker_field_TaskEndDate from="now"  
to="10 days" (...) {LIST}
```

Solution

Added group attribute as suggested by **@Jonny Bradley**:

Example:

```
{filter field="tracker_field_bug_tracker_priority" editable="multiselect" group="together"}  
{filter field="tracker_field_bug_tracker_assignee" editable="content" group="together"}
```

This allows searching for bug tracker items with certain priority OR certain assignee.

From Victor:

Implemented for upcoming Tiki 26:

<https://gitlab.com/tikiwiki/tiki/-/commit/23570b601811176840897824f6e66427ab00563e>

I used simple `group=""` argument (note the missing underscore prefix in contrast with `customsearch`) to be consistent with other list plugin arguments.

Example:

```
{filter field="tracker_field_bug_tracker_priority" editable="multiselect" group="together"} {filter field="tracker_field_bug_tracker_assignee" editable="content" group="together"}
```

This allows searching for bug tracker items with certain priority OR certain assignee.
