Description

Users can sign in, but the groups they are in are not being synced.

Worked ok in version 5. I've upgraded to version 18.3 via version 12 and now I'm stuck.

No errors in the tiki log.

The only odd line is this:

Searching for user information with filter: (cn=wiki_user) at line 280 in
/srv/tiki-18.3/lib/auth/ldap.php

I would expect the filter to read "memberUid" ..

I've tried the fix here: <https://dev.tiki.org/item5657>, but just a got a white-screen of death 😞

Solution

Damn .. you guys make it hard with two tabs, with duplicated settings ..
These settings got it working.

Workaround

I need to add the users to groups manually, but this disrupts workflow for users when they need to raise an internal support ticket.

Should the LDAP and LDAP user fields be duplicated on the LDAP external groups tab?

ewong 28 Mar 19 01:40 GMT-0000

I'm having trouble with the ldap groups syncing with an OpenLDAP server and the repeated LDAP user field in both LDAP and LDAP external groups confuses me.
Should they be both filled in?
