Description

When the FOOTNOTEAREA plugin is called more than once for a single context, footnote numbers are duplicated. For example, if a single wiki page contains 2 footnotes and that each is displayed in its own footnote area, both notes have the number 1. Moreover, clicking on the second footnote reference brings to the first footnote's content.

When a page displays several footnote areas because it contains several objects, it is OK to re-use footnote numbers. For example, if reading a list of articles and 2 articles use footnotes, it would be bad to use different footnote numbers than the numbers which would be used if viewing the articles individually. It is good that each article is displayed with a footnote number 1.

Unfortunately the parser has no idea about context up to Tiki 19. In Tiki 19, the second footnote area displays both footnotes, as in Tiki 16 and below, so the first footnote is duplicated. In Tiki 17 to 18, each footnote is displayed just once, the problem is a conflict between these.

Solution

This bug was solved by r65252 and r65257. But it was re-introduced by r66044, which works around Footnote re-use impossible (sameas FOOTNOTE parameter removed).

Sorry, but I don't understand why there should be two (or more than one) footnote areas on one page...
What is the use case?

Philippe Cloutier 19 Mar 19 18:35 GMT-0000

I suppose there are several cases possible, but note that in the first case which was brought to my attention the areas were not really in the same page. A page which calls FOOTNOTEAREA includes another page which also calls FOOTNOTEAREA.
