- ✖ Tiki Calendar add possibility to pick a time zone (especially UTC) so daylight saving time (DST) is well handled.

Description

For a project with requirements that are too complex for Tiki-Calendar, I use the TrackerCalendar plugin. One of the problems I'm struggling with is the handling of timezones. I am running two Tiki installations on the same server. Both with Tiki version 18.3 and PHP version 7.1.28, but with different MySQL settings. For both systems Search engine Lucent was active and timevalues were displayed correctly. On both systems I changed to MySQL full text search; clear all Caches; rebuild search index; clear all Caches again.

Now system 1 still shows timevalues correctly in TrackerCalendar plugin. System 1 is running on MySql 5.5 with InnoDB.

But system 2 shows UTC values. System 2 is running on MySql 5.7 with MyISAM.

Wow!

Congrats on finding that! I hope you didn't waste too much time and go too crazy in trying to figure this out!

FYI, there has been a major upgrade to the lib in Tiki19:

<https://doc.tiki.org/tiki-pagehistory.php?page=PluginTrackerCalendar&newver=44&oldver=43>

Marc,

sorry for answering so late. Since am still fighting with other problems of Trackercalendar, I did only a quick test with Tiki 19. In system 2 now with Version 19.1 and all other settings unchanged calendar items are shown with correct time values.

Thank you
