Description

At a Tiki 18 site that is closed except for those with permission to access (admins) I made a "Test Users" group and assigned the perm "can access closed site" to the group. But test users in this group can't access the site; the login fails (page refreshes with fields empty). When I'm logged in as an admin and switch to a test user at tiki-login.php, I'm immediately logged out of the site.

This needs to be confirmed at other Tiki installations, but seems to be a regression.

UPDATE: The feature works ok at my localhost branch 18, so there is probably a configuration issue at the problem site.
