Description

Hello,

I've just discovered elFinder feature in Tiki's File Galleries which allows one to virtually organized images and other media files in (sub)folders and I'd like to take advantage of it since with static-site-generators which I used in the past I was able to put images close to my blog posts.

There is nice feature in File Gallery as Syntax tips showing the syntax to be used to link the image in the content.

For instance, the wiki syntax to be used in wiki page for my image is:

```
{img fileId="2"}
```

and link for the file from a Wiki page is

```
[dl2|image.jpg]
```

so i'd like that the syntax tips can also show 'direct' URL to be used when using image with e.g. Markdown plugin, which in this case would be:

```
http://mytld/display2
```

so that one can use the following Markdown syntax:

```
![Image title](http://mytld/display2)
```

in Markdown posts.

What do you think?

Sincerely,
Gour
