Description
    Still here on Tiki25 and Tiki26.
    If you save a value for the "image_max_size_x" and "image_max_size_y" you can't use the upload modal dialog of the tracker field "file" to upload a file attached to a trackeritem.

    I had to reset the values manually in the database and then go the "edit" action of the file gallery and (re)save it. Trying to change the values from the HTML interface directly ended with a WSOD

    I've seen that happen again on a Tiki24.

    It appears that if you fill ONLY one ends of the height or the width parameter when you upload a new file Tiki will get confused and in result the file will be corrupted.
    Tiki should be able to resize using one end only. (max width or max height) and adapt OR we should force saving both parameters

    ---

    On a Tiki 20

Setting only Maximum height of images in gallery in a gallery leads to a chain of incoherence and errors.

I tried to set a value for width but it turned to be worst and uploaded files are corrupted and turned into .txt files.

Workaround
Only reseting back values to 0 (unlimited) solve issues and problems.

In Tiki24 it is not possible to upload a file from a tracker field type file (it is using a modal) if the file gallery destination has its the "Maximum width of images in gallery" and/or "Maximum height of images in gallery" changed from 0 (unlimited) in the file gallery properties.

Bernard Sfez / Tiki Specialist 08 Jan 24 17:02 GMT-0000

Still there on new Tiki26.
If you give any value to resize files (pictures) using GD you won't be able to upload a file.
