Description

PluginGanttChart is a very promising feature in Tiki for real-world uses cases of project management

We lack the ability to filter results provided to the plugin gantt chart by means of filtering content from the unified search index, in an equivalent way to what it's possible in other PluginList-based plugins using the `filter` control block. See examples:

- Filtering displayed tracker items based on values in a field (without user intervention)
https://doc.tiki.org/PluginPivotTable#Advanced_example_2
- Allow users to filter displayed tracker items based user input in a search form:
https://doc.tiki.org/PluginPivotTable#Advanced_example_3

What would be needed to get this GanttChart extended this way?

Thanks in advanced

You can reproduce this issue by means of applying the GanttChart profile.

Example of coded shown in that profile:

```
{GANTTCHART(trackerId="1" name="trackerganttTaskName" begin="trackerganttStartDate"
end="trackerganttEndDate" roleId="trackerganttRole" status="trackerganttStatus"
progress="trackerganttProgress" canWrite="true" canDelete="true" canWriteOnParent="true"
description="trackerganttDescription" code="trackerganttCode" effort="trackerganttEffort"
resourceId="trackerganttResourceId" order="trackerganttOrder" level="trackerganttLevel"
depends="trackerganttDependencies" startIsMilestone=="trackerganttStartIsMilestone"
endIsMilestone=="trackerganttEndIsMilestone"))} {filter
field="tracker_field_trackerganttTaskName" editable="content"} {filter
field="tracker_field_trackerganttDescription" editable="content"} {filter
field="tracker_field_trackerganttResponsible" editable="content"} {filter
field="tracker_field_trackerganttEndDate" editable="content"} {GANTTCHART}
```
