Description

Please mind that the described H5P related bug occurs whilst not using H5P, but using the file gallery when H5P is activated. Deactivating H5P makes the bug disappear.

1. Upgraded existing Tiki 19 to Tiki 21.x (future, currently trunk) at 16 Oct 2019.
2. Activated H5P
  1. created an extra new file gallery for H5P
  2. did not (yet) set *Site Key* and *H5P UUID*, as I do not yet heard about them
  3. did not yet upload any H5P files and not yet try to use H5P in this Tiki instance

4. the folder in tikiroot *storage/public/h5p* is existing, likely created automatically during upgrade
3. When I got to the preferences of an arbitrary file in an arbitrary existing file gallery, maybe change some preference like editing the description or even do no change at all and then I save this file, two things happen:
  1. The file is saved/updated correctly (ex: description updated)
  2. Tiki does not refer back to the file gallery, but instead to a *WSOD* blank page with an error message. I have to manually alter the url in the browsers address line or to use the browsers back button to get back to my Tiki.

This is the error message:

```
Parse error: syntax error, unexpected ')' in /www/htdocs/Path-To-Tikiroot/lib/core/H5P/H5PTiki.php on line 947
```

Solution

Hi Torsten Fabricius

Is this still happening for you? (sorry for the late attention on this)

Seems absolutely fine for me (although found a few other issues and had to delete all my old h5p's from before again, then had to enable the h5p hub to be able to create new ones).

Which version of php is this on? And assuming it's 7.2+ can you make a show2 instance?

## Comments

**John Morris** 30 Oct 19 11:47 GMT-0000

Thank you for adding me to "keep informed" Torsten.

**Jonny Bradley** 03 Mar 21 17:30 GMT-0000

I set this to pending as i've never seen it - can it be closed now?
