Description

Selecting a field in the parameter "Sort Fields" of an Items List tracker fields block index from being rebuilt.

It throw the following error:

```
warning: Divide by zero on "0"  
error: The search index could not be rebuilt.  
Expression #1 of ORDER BY clause is not in SELECT list, references column  
'kindergarten_tiki20x.ttif0.value' which is not in SELECT list; this is incompatible  
with DISTINCT
```

Un-selecting it solve the issue and the index is rebuilt correctly.

PS: I created an instance but wasn't able to access it to demonstrate (error 500).
