Description
This maybe an issue of the localization (I use the German version of Tiki 18.3).

The lifetime of the PHP session is adjustable, via tiki-admin.php?page=general#contentadmin_general-2

There it says, that the variable is defined in "minutes". That is not correct, PHP sessions are defined in seconds. The preset value (10080) corresponds to that. 10080 seconds equal exactly 168 minutes or precisely 2.8 hours. Definitely sessions time out after 2 hours something, not after 168 hours.

This is just a minor issue, and could be rectified with the next planned (or executed) update.

This "bug" IMHO does not need to be demoed...

Thanks
Hman
