Description

While it is not wise to create or publish a slider with different height images it happen and the result is really naughty. It push down content then push it up...

See : the show instance of this ticket and

https://doc.tiki.org/PluginList-output-control-block#Report_Formatting

As discussed in the January 2020 Tiki Roundtable Meeting it will be great to have a new optional parameter to fix the height no matter the usage (plugin in page or plugin list template).

- Swiper
- Carousel
- Plugin List carousel template

Solution

Add an optional parameter to avoid change of height:

- Use slide smaller height and hide overflow (default)
- Use slide higher height

- Let images set the height (if image don't have the same height the slider value will varies)
