Description

This feature ('jQuery-UI Chosen Select Boxes ') in Control Panels > Features > Interface does not work correctly.

(also checking 'Sortable Chosen Multi-selects ' makes no difference)

I tried three options, but none is acceptable (e.g. usable):

- using a Div + ' jQuery-UI Chosen Select Boxes' results in unusable *narrow* dropdowns (e.g. unreadable)
 - using Fancy Table, or, Wiki Tables + 'jQuery-UI Chosen Select Boxes' is not possible because than using 'output', e.g. `{$_44|output}` is not possible due to:
 - 1) Fancy Table using '|' as the separator,
 - 2) the dropdown box hits the bottom of the Table and stops rendering, e.g. does not drop down below the boundaries of the table
- using any these WITHOUT 'jQuery-UI Chosen Select Boxes' results in a *super tiny font* that makes the dropdown barely usable (font size 4 ot 5)

It seems that the 'TableSorter' feature is interfering (same code in TrackerList + TableSorter as in Fancy Table)

My guess is this is another Bootstrap issue.

Workaround

currently the only option I see is to not use this option and accept using extremely small text on dropdown menus.

Jonny Bradley 15 Feb 20 12:45 GMT-0000

Was this the thing that seemed to be theme dependant? I've not come across it in most use cases - maybe a show2 example would help?

Thanks Mike 😊

Mike Finko 16 Feb 20 16:44 GMT-0000

No, I don't believe it is theme related, but Tiki 20x related because I get the same result across various themes (at least three).

Mike Finko 17 Feb 20 12:40 GMT-0000

creating a 'Show2' is a very painstaking process 😞

been at it for almost 40 min. so far, many error messages along the way, not for the faint of heart! will push forward a little more.

Mike Finko 17 Feb 20 12:42 GMT-0000

I guess it just wasn't meant to be right now, more '404 Not Found' errors, I'll take this as a sign from above and try back later.
a little later - the link stopped working, the last thing I did was try to apply a Profile so I didn't have to manually configure everything.
password changed to : admin123 (or maybe admin 321)

Jonny Bradley 17 Feb 20 14:16 GMT-0000

Sefurl doesn't work on show or show2 (not totally sure why, it just needs the .htaccess enabling) which i guess the profile you ran enabled - this should be in the tiki.ini if it can't be made to work...
I'm resetting the password to 12345 (which is the default for show, but i guess it doesn't say that anywhere).

Ok, i disabled feature_sefurl so it should be usable now - how about we try and make the process a bit easier, at the RTM maybe?

Mike Finko 06 May 21 13:58 GMT-0000

Hi Jonny,

I believe you solved this with the 21.4 'special' release (a month after 21.3). It works good and font size is perfectly readable in Firefox (which I rarely use as it 'cooks' my poor Intel i3 processor) however in all the Chrome based browsers (Chrome, Brave, Opera) the font it still tiny. I'm guessing you tested in these and they worked for you?

Thanks,
Mike

Jonny Bradley 06 May 21 14:58 GMT-0000

Hi Mike

Where am i supposed to be seeing this? On <http://mikeua-11714-7259.show2.tikiwiki.org> it's not even enabled. Not heard any other reports or noticed this myself and i use Brave mostly.

Mike Finko 06 May 21 18:04 GMT-0000

Hi Jonny,

no, just on all the sites I use. I tried to 'Destroy' that show instance and create a new one (clean, fresh install) as this is an old 20.2 instance, but when I click the button 'Destroy Instance' it just scrolls up to the top of the field 'Demonstrate Bug'. Accidentally clicked 'Create Snapshot' before reading what it was, seems to be going a long time.

Hopefully universe's higher powers will grant me the patience, mental health and well being as well as inner spiritual peace to be able to navigate 'Show.tiki.org' to demonstrate this issue 🙄

Jonny Bradley 07 May 21 11:12 GMT-0000

Hi Mike

Definitely something not right with show2 - i also tried to destroy that one, and nothing seemed to happen but there were some 503 errors in the console, so i reloaded the page and tried "svn update" and that said it was creating a new instance - heaven know which branch it's on though!

Still, fingers crossed... 🤞

Replied to
Hi Mike...

Hi Jonny,

I wanted to wait a while to make sure any processes were finished, now I get the following message for <http://mikeua-11714-7259.show2.tikiwiki.org/>:

"Tiki Installer missing third party software files

Your Tiki is not completely installed because Composer has not been run to fetch package dependencies.

You need to run `sh setup.sh` from the command line.

See <https://doc.tiki.org/Composer> for details."

Does this shed any light?

Thanks,
Mike
