Description
        In 06432228 2FA arrived in Tiki for Tiki21 but there are a couple of improvements that would be
        nice to have for 21.0 🏆

- When i enabled it on my user preferences and then revealed the QR code (which i think it
  should show automatically) there's no input to enter a code to confirm it's working, which most
  sites using 2FA let you do.
- -- Then when i logged out and then went to log back in, i think that login form should have the
  2FA input on it, rather than link to a new form (please)-- There is a param on the login box
  module called show_two_factor_auth - set it to "y" to enable, thanks!
- Also a question: Is it compatible with InterTiki? If so i'll enable it on https://tiki.org for extra
  dogfood! ?

        Mainly thanks!
