Related-to
    • 🟢 Console, Batch upload; Additional parameter in the console to deal with duplicate files import

Description
    Explaining the way to reproduce the issue;

    Using a default Tiki21;
    Set storage to use directory
    Enable batch-upload and set the batch-upload directory

    Upload folders with files in the batch-upload directory
    Run the following in your terminal (change the fileId for the gallery you want):

    php console.php files:batchupload 1 --subdirToSubgal --createSubgals —confirm

    It will create the subgalleries and place the files in each subgalleries.
    You'll have 1 file in your file directory for 1 file in your file galleries.

    Redo the same operation with the same files and folder.
    It will add a version to the previous files.
    You'll have 2 files in your file directory for 1 file in your file galleries.

    Etc... It will add a file each time.

    To illustrate:

You may want only to store 1 file (especially if you have automatic script running that is the most important reason to use the console command)

How to limit the number of stored file per file in the file galleries.

In each file gallery subdirectory there is a setting "Maximum number of archives for each file" that is set to 0 (meaning unlimited).

As the file subgalleries are created by the console.php they are create by default with unlimited. We need a way to set the value by default for all new created subgalleries.

I suggest a new parameter to set by default (for all new gallery) the maximum of version (archive) per file.
Eventually a parameter to override it in the console.php command.

What you try to achieve is not clear...

Have you tried to set **Allow file duplicates** to something different than "Yes, even in the same gallery"?
Are the new files with the same name different from the ones already online?

Jean-Marc Libs 24 Feb 20 15:31 GMT-0000

I agree a new parameter "Default maximum number of archives for each file" which is set to 0 (meaning unlimited)" by default would not change the current behavior and expectations and it would be an improvement to Tiki.
So +1
That would give you a way of solving your issue by I imagine everybody else would still be caught, so it's more a quickfix than a solution.

Jean-Marc Libs 24 Feb 20 15:38 GMT-0000

I don't think the current behavior is wrong. The command says it's going to upload files and it does upload them. It does not really claim to do elaborate synchronization as powerful as *rsync*. Uploading the same files again and again looks like an edge case which has not been planned for.

What we can do to deal with your use case in a way normal users can figure out? My suggestions:

- An option for `php console.php files:batchupload` which tells what to do with files which are already there. Like `--duplicatedFileIgnored` and `--duplicatedFileReplacesPrevious`
  - `--duplicatedFileReplacesPrevious` : Replace the file with the new one and delete the previous
  - `--duplicatedFileIgnored` : Ignore new one if a file with the same name is already there
- An option for `console.php files:batchupload 1 --subdirToSubgal --createSubgals` for providing the value for "Maximum number of archives for each file" in newly created files. Like `php console.php files:batchupload 1 --subdirToSubgal --createSubgals --createdSubgalMaxNumArchives=1`

Opinions?

Great idea, I'll create a feature request.
Thanks

(sorry for the delay, I don't receive notifications from dev)
