When attempted through the command line with this command,

```
php temp/composer.phar require --update-no-dev --prefer-dist media-alchemist/media-alchemist:^0.5.4
```

This is then the error message shown:

Running update with --no-dev does not mean require-dev is ignored, it just means the packages will not be installed. If dev requirements are blocking the update you have to resolve those problems. Installation failed, reverting ./composer.json to its original content. root@computer:/var/www/html/21.x# php temp/composer.phar require --update-no-dev --prefer-dist monolog/monolog:^1.0.0 Do not run Composer as root/super user! See <https://getcomposer.org/root>

I could solve by means of downgrading the monolog/monolog package to 1.x, and then reinstalling through command line worked.

```
root@computer:/var/www/html/21.x# php temp/composer.phar require --update-no-dev --prefer-dist monolog/monolog:^1.0.0 Do not run Composer as root/super user! See

I can report that I had no issues. New install of TW 21.3 and upgraded to 22.1 To that point, I used Snowflake (Ubuntu SSH GUI) to access terminal. I executed

```
php temp/composer.phar require --update-no-dev --prefer-dist media-alchemyst/media-alchemyst:^0.5.4
```

and after it ran through all the stuff it installed and gave me this message: 20 package suggestions were added by new dependencies, use `composer suggest` to see details. Generating autoload files

I am on shared hosting on a Linux image. I also executed the script in the root directory. Hope it helps!
