- ✖ Using actions menu modal (actions menu or plugin list) is broken

Description

After clicking on the save button on a modal the user is redirected to the page "undefined". This happen since Tiki21 and it is working fine in Tiki20.

Tested on : tiki-21.0.RC1

To reproduce:

1. Login as Admin
2. Enable trackers and button plugin
3. Create a tracker with a few fields (in the fade I pasted the export for the tracker and the fields)
Tracker export

Field Export

4. Populate the tracker with a few items
5. Edit a page and create a pluginList with an edit button
In my sample I used a table output with fixed values for editing the item 1 only (pasted below)

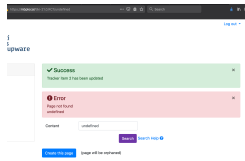

I tested with a link and a button to be sure
PluginList content

Your page should end with something like this:

When you click on the link or the button you will have the "Update Item" modal.

- Close will bring back to the page (GOOD)
- Preview won't do nothing (I think it shouldn't be here don't see how it will be used)
- Save will save but redirect the user to an "undefined" page (BROKEN)

Video : <https://share.vidyard.com/watch/UCAew92XGPH4zHUQ3G2QbG?>

Saving used to redirect to the page, same list, same result (if customSearch) in Tiki20.
Here a Tiki20 (using smarty template) with the same code for the button:
