Description

Share feature allows access 1 time less than value set in threshold.

Tested with sharing access 3 times to 2 users (sharing object perms), and it could only be viewed twice by each user.

Attempted to get it reproduced in a show2.t.o instance.

Applied the company intranet profile. Enabled the share feature, and I was able to shaer a wiki page 5 times, and the email receiving the url with token was able to view that page 5 times. No more, no less.

No idea what happened the other day in the test we did Jyhem and myself on a Tiki 21 production site of myself.
