### Description

Hello,

tried to do fresh installation of Tiki-21 (from \*.xz tarball) on my production server and the installer seemingly choked after selecting "Inno DB", iow. pressing the button did not show any effect and it looked as the installed just died.

After several attempts, I had to leave the process working for some time having some non computer-related tasks to do and after returning back to the computer, discovered that installer did finish the job, but no progress-bar dialog was visible, although the feature did work during my testing of Tiki before release, so it is certainly a regression.

Sincerely,  
Gour
