### Related-to

-  'Display Post new comment form by default' pref broken

### Description

There is a problem in Slides in 21.x: Section about wiki page comments wrongly placed on top of all slide titles, when some setting is on related to comments.

This was not happening in previous LTS versions, with the former slideshow system (that's why I tagged it as regression; untested in 19.x, 20.x, etc).

Reproduced here:

<http://xavi-9794-7332.show2.tikiwiki.org/tiki-slideshow.php?page=Tiki+Wiki+CMS+Groupware#s0>  
u: admin

p: 12345

Just after enabling the pref:

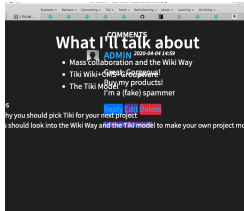

`wiki_comments_displayed_default`

and while keeping the default pref: `wiki_comments_allow_per_page` Disabled (which is the default setting).

You don't see the comment as Anonymous.

You'll see the comment if you log as admin.

In all cases, comments should NOT be displayed in a Wiki slideshow: <https://doc.tiki.org/Slideshow>

## Solution

Issue fixed in 24.x. (show2.t.o instance upgraded from branch 20.x to branch 24.x server side, so that tiki db could be upgraded and reused).

## Workaround

Change the default setting: `wiki_comments_allow_per_page` to any value: apparently, the comments section is not displayed any more in slideshow mode regardless of the value set in the slideshow wiki page (!).
