Description

When using the image plugin to embed an image from the file gallery into content, I have found that certain images will not be zoomed to more than 100 percent. Regardless what you set for height=, it will always display images at 100%.

So far I have not found what those images affected could have in common.

Reducing the size (values below 100%) is never a problem, even on those images that cannot be zoomed to more than 100%, strangely enough...

Hm, I wanted to add 'feature: file gallery' to the bug list, but the editor, when I want to edit my bug report and click on 'save' , does not save the edited bug! A first I thought I clicked somewhere else, then I saw a grammatical error in my bug report text ("are" should read "is"), but when changing this text, that, too, is not being saved.

Sigh. Yet another bug. Sadly. and with all respect for the many people doing a great job with Tiki Wiki, I have to conclude that after so many years of robust performance, Tiki Wiki is full of bugs. 18.x (and the 21 on dev.tiki.org) is the worst Tiki Wiki I ever used...

Gary Cunningham-Lee 09 Apr 20 07:35 GMT-0000

For the record, I edited the description text (changing "are" to "is" as you indicated) and the change was saved successfully. I don't know why my experience was different from yours, though.

hman 09 Apr 20 08:01 GMT-0000

dev.tiki.org was down for maintenance for a couple of minutes, maybe that is the explanation. I will try again...

hman 09 Apr 20 08:05 GMT-0000

Confirmed. I can now edit both the feature list and the body text, so this was indeed caused by the maintenance downtime. But it should IMHO be checked why dev.tiki.org let me start an edit in the first place, at a time when the backend was already partially nonfunctional...

hman 09 Apr 20 09:31 GMT-0000

Zooming works with absolute pixel values, only percentages are non-functional. So that is kind of a workaround, but very cumbersome (value has to individually calculated for each an every image separately...)
