- 🟡 Can't switch order of menu options

Description

Reordering of menu options is not working.

The menu entries can be dragged, but will not be rearranged.

This is happening with newly created and already existing menu items.

sorry for the dupe

Jonny Bradley 09 May 20 16:39 GMT-0000

No worries, just spotted the wish search form defaults to open ones only, and the other one is pending...

Jonny Bradley 09 May 20 16:37 GMT-0000

Hi

This is fixed in 21.x and will be in the next release, it was just one file really that has the fix, if you're not using the git or svn checkout or a daily tarball then just replace your `templates/tiki-admin_menu_options.tpl` with one from gitlab or sourceforge (but keep a backup of the old one just in case!)

David Bense 16 Jul 20 08:50 GMT-0000

In 21.x tiki-admin_menu_options.php gives a somewhat corrupted list of the menu items. It's almost impossible to move items. Tried to use the file

`templates/tiki-admin_menu_options.tpl`

from the repo but it will only show a white page.

I cannot create a show2-instance here that is working, error message:

"Tiki Installer missing third party software files. Your Tiki is not completely installed because Composer has not been run to fetch package dependencies. You need to run `sh setup.sh` from the command line."

I guess it's because I did not create the tracker item.
