Tracker TextArea field multilingual parameter filter is not applied in plugin List (all language are displayed)
Here the tracker view with English language selected (content is displayed for English only that’s correct)

Here the customSearch view with English language selected but all languages are displayed for the field Abstract (note that title, a text field, is working fine)

Doesn't look like the show instance has been fully set up to replicate the problem?

Jonny Bradley 08 Jun 20 15:49 GMT-0000

Seems ok now, thanks to whoever fixed it 😊
I could finally configure the demo.
It show the bug as described.
