Description

On a tracker item with category field (multiselect) the admin can assign during the item creation different category to an item.

User with "Can admin categories (tiki_p_admin_categories)" and field editable perm can't even see the categories.

I created an instance that show the issue.

Update (27/07/2020)

It turns out that when you modify "this" tracker permission, the global permissions on "Can change the categories of an object (tiki_p_modify_object_categories)" won't be applied and will be then "saved" disabled even if you didn't change anything for it.

This is a bug. If you don't change a perm for an object (in this case a tracker but it may be valid for any object) the global should keep being applied.

Workaround

You have to manually force the permission on the tracker itself (this may be valid for other objects)

Comments

Jonny Bradley 17 Jun 20 07:52 GMT-0000

Do they have `tiki_p_modify_object_categories` *Can change the categories of an object?*

Tiki doesn't have a `category_admin_perm` permission, do you mean `tiki_p_assign_perm_category` *Can assign perms to category?*

Bernard Sfez / Tiki Specialist 17 Jun 20 10:48 GMT-0000

They have all category permissions on the global perms (including the Tiki one).

The instance I set shows the same.

Bernard Sfez / Tiki Specialist 27 Jun 20 19:27 GMT-0000

Jonny,

Bad copy/paste, I meant they have "Can admin categories (`tiki_p_admin_categories`)" permissions.

They have also "Can change the categories of an object (`tiki_p_modify_object_categories`)"

... In fact they have every permissions BUT "Can assign perms to category (`tiki_p_assign_perm_category`)"

Found the culprit, chek my update in the bug description. ;-)
